

VOCABULARY

Forces- changes the motion of an object. Pushes and pulls in a particular direction.

Gravity- a force which pulls things towards the centre of the Earth. Discovered by Sir Isaac Newton.

Earth's gravitational pull- pull that Earth exerts on an object pulling it towards the Earth's centre.

Weight- The measure of the force of gravity on an object.

Mass- a measure of how much matter (stuff) is inside an object.

Air resistance- resistance or drag, acts against gravity on falling objects.

Water resistance- type of force that uses friction to slow things down that are moving through water.

Resistance- a force between surfaces that are touching.

Attract- causes something to move towards.

Repel- causes something to move away.

Poles- Magnets have a North and South Pole.

Magnetic field- magnets electric charge

Sir Isaac
Newton

1643-1727

An English mathematician, physicist, astronomer and author who is famous for his laws of motion, theory of colour and the discovery of gravity. Gravity is measured in Newtons (N)

Types of forces.

Water Resistance

Air Resistance

Friction

Upthrust

Weight

My **WEIGHT** on Earth is around 560N

My **WEIGHT** on the moon is around 90N

My **MASS** is always 56kg!!

The weight of an object is caused by gravity pulling down on it. Objects with more mass have a greater weight, as the force of gravity pulls them down more strongly.

Magnets

Magnetic

Not Magnetic

Magnets have magnetic fields.

The Earth is also a giant magnet. This is how compasses work.

Magnets have North Poles and South Poles.

Magnets can come in all shapes, sizes and strengths.

Levers, pulleys, gears and cogs.

Can be used to make a small force lift a heavier load. A lever always rests on a pivot.

Can be used to make a small force lift a heavier load. The more wheels in a pulley, the less force is needed to lift a weight.

Gears and Cogs

Gears or cogs can be used to change the speed, force or direction of a motion. They turn in opposite directions when connected.

Forces and Magnets

Water resistance.

This submarine is streamlined, it has a pointed front to cut through the water and a smooth body to allow the water to flow over it.
